Application/Control Number: 09/850,354

Art Unit: 3683

1. This application is in condition for allowance except for the following formal matters:

In figures 1-3 the electric regenerative brakes should be clearly shown and labeled (specification changes should also be made accordingly) similar to the way in which the friction brakes 26 are clearly shown and labeled. Examiner notes that a rectangle drawn above the bottom wheel 18 in figure 3 appears to represent the presence of an electric regenerative brake but is not labeled and is not shown on the top wheel 18.

Prosecution on the merits is closed in accordance with the practice under *Ex* parte Quayle, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO**MONTHS from the mailing date of this letter.

Allowable Subject Matter

2. Claims 1-4 and 7-13 are allowed.

Response to Arguments

3. Applicant's arguments, see Appeal Brief, filed 10/31/03, with respect to the specification objection, the 112 first rejections and the 102 and 103 rejections have been fully considered and are persuasive. The abovementioned objection/rejections have been withdrawn.

With regard to the specification objection and the 112 first rejections, Examiner agrees that since Applicant describes on pg. 5 lines 1-2 that there are electric regenerative brakes on the first wheeled axle and on pg. 3 lines 9-11 that there are no

Application/Control Number: 09/850,354

Art Unit: 3683

friction service brakes on the first wheeled axle, the originally filed specification supports the inclusion of the limitation of the first wheeled axle exclusively having only electric regenerative brakes. Examiner also agrees that pg. 5 lines 2-3 provides support for the second wheeled axle being non-driven and having exclusively only friction brakes 26. It is agreed that although "comprising" is an open-ended term, the use of the words "exclusively" and "only" sufficiently limits the first wheeled axle and the second wheeled axle to electric regenerative brakes and friction brakes, respectively.

With regard to the 102 and 103 rejections, Examiner agrees that the prior art of record fails to show the limitation of the first wheeled axle having exclusively only electric regenerative brakes and the second wheeled axle having only friction brakes. For example, US Patent 5707115 to Bodie et al. teaches the use of a first wheeled axle having only electric brakes 48,50 and a second wheeled axle with driven wheels 24,26 having friction brakes 36,38 and regenerative electric braking capability via element 18. US Patent 5378053 to Patient et al. shows the front axle having wheels 11,13 being electrically braked via element 15 and frictionally braked via elements 19,21,23 as shown in the figure on the front of the patent. Similarly, the wheeled axle 24,26 of the Manabe (US Patent 6120115) reference is shown to be both electrically braked via elements 22,28 and frictionally braked via elements 32,34. Therefore independent claims 1, 4, 7, and 12 are allowable. Dependent claims 2, 3, 8-11, and 13 are allowable due to their dependency from one of claims 1, 4, 7, and 12.
